

Dear Clients,

Amsterdam, May 29, 2020

Hereby attached our Russian Arm Dynamic safety protocol and our RA Dynamic Risk Assessment.

Our Covid modifications in and around the Russian Arm Dynamic are as follows: Provided by us for the Russian Arm Dynamic is the 3-layer filter medical face masks in combination with protective face screen and disinfection materials which are the widely used protective materials, approved by the Medical Health department and WHO. It is used by medical personnel and other professions to prevent the spreading of the Covid19 virus. In view of these regulations we do follow the official ways of organizing the group events such as film shoots. Besides the official comments here above, the protective face screen has the advantage that the person wears it during the shooting day in and outside the RA car. In this way he or she will be protected to spread and be spread at all times. So far we have done recently three car shoots successfully in this way.

All our Porsches are equipped with five separate individual leather seats and five separate entrances. All equipment will be cleaned before and after the shoots.

If you have anymore doubts or questions of course let us know. 24/7 available.

Viral infections – hygiene works!

By taking just a few simple measures, you can help protect yourself and others against infectious diseases.

Key hygiene tips:

If you need to cough or sneeze, use a tissue or the crook of your arm – if you use a tissue, make sure you dispose of your used tissue in a bin with a lid.

Keep your hands away from your face – avoid touching your mouth, eyes or nose with your hands.

Keep your distance from people who are coughing, sniffing or who have a fever – including those suffering from seasonal cold and flu illnesses.

Avoid direct contact (e.g., do not shake hands or hug) when welcoming other people or saying goodbye.

Wash your hands regularly and properly (at least 20 seconds) with soap and water – especially after blowing your nose, sneezing or coughing.

Find more information on protecting yourself and others against infectious diseases and FAQ about novel coronavirus on www.infektionsschutz.de and www.bzga.de
